

**KVS-E90 Front Touch**

Rugged keyboard made of stainless steel with integrated touchpad for front panel mounting.

**Description**

This keyboard has an integrated [Touchpad](#) with 2 keys instead of the NUM-Block. This saves a lot of space and the touchpad is close to the rest of the keyboard.

If the NUM-Block is needed, there is another version of this keyboard, that has the touchpad integrated instead of the arrow keys. You can find the other keyboard [HERE](#)

Like the other keyboards of the fullsize-range this keyboard is water- and dust proof to IP65 and has a good tactile feeling due to the raised keycaps.

As frontpanel mounted version this keyboard can be easily integrated into an existing housing.

For further information you can go to the [main page](#) of this keyboard range.
